

Environmental Health and Safety Verification Form

(School Name)

_____ (the "School") maintains buildings (the "Buildings") located at _____ (Address). The Buildings have been inspected for the presence of asbestos-containing materials as part of the School's asbestos Management Plan. This Management Plan was developed in accordance with the Asbestos Hazard Emergency Response Act of 1986 (P.L. 99-519) and the federal rules and regulations enacted thereunder from time to time (collectively, "AHERA"). The School's most recent AHERA 3-Year Re-inspection Report is located in the School office and is available for review.

The undersigned contractor (the "Contractor") desires to perform work for the School in or around the Buildings. The School requires contractors who perform work for the School in or around the Buildings to comply with all applicable environmental, safety and health regulations, including, but not limited to AHERA, as a condition to being permitted to perform work at the School. Accordingly, the Contractor is required to provide evidence to the School of the Contractor's compliance with all applicable environmental, safety and health regulations and to provide such evidence to School personnel. At a minimum, the following documentation must be maintained by the Contractor and should be delivered to the School's principal or business manager prior to the Contractor's beginning work for the first time and then annually thereafter.

Applicable Asbestos Training Certifications for all Contractor personnel performing work in or around the Buildings in accordance with 29 CFR 1926.1101 and the Ohio Revised Administrative Code.

Evidence of compliance with all training requirements of the Occupational Safety and Health Administration which govern work activities and procedures relevant for work performed by each Contractor.

No Contractor personnel performing work in or around the Buildings should make contact with any existing asbestos-containing material. Only licensed, trained and accredited asbestos abatement contractors shall be permitted to contact asbestos-containing material and to repair, encapsulate, enclose, or remove asbestos-containing materials in or around the Buildings.

In the event that Contractor personnel encounter asbestos-containing materials not previously known to the School, or Contractor personnel intend to conduct work that will contact existing asbestos-containing materials (in each case "Asbestos Affecting Activity"), the Contractor shall immediately notify the School's principal or business manager before undertaking any Asbestos Affecting Activity. The School shall engage an appropriate asbestos abatement contractor to mitigate any asbestos exposure before the Contractor shall be permitted to continue work in or around the Buildings.

Additional questions or comments related to asbestos or other environmental, safety and health hazards shall be forwarded to the undersigned School official at the phone number listed below.

A copy of this form shall be Included in the asbestos management plan and subsequent re-inspection documentation.
